Press Release

Consumer confidence Index in January 2021 decreased to 60.7.

According to the data provided by Info Sapiens “Consumer confidence of Ukrainians”, conducted by Info Sapiens and financially supported by Dragon Capital, the Consumer Confidence Index (CCI) equals 60.7 in January, which is 5.2 points lower than in December 2020. All components of the indicator decreased.

In January 2021, the Consumer confidence Index (CCI) equals 60.7, which is 5.2 points lower than the indicator in December 2020.

Index of the Current Situation (ICS) equals 57.4 which is 3.4 p. lower than previous month. The components of this index have changed as follows:

- Index of Current Personal Financial Standing (x1) equals 48.2, which is 5.1 points lower than the indicator in December;
- Index of Propensity to Consume (x5) decreased slightly to 66.6.

In January, *Index of Economic Expectations (IEE)* decreased by 6.4 points and equals 62.9. The components of this index have changed as follows:

- Index of Expected Changes in Personal Financial Standing (x2) equals 68.6 which is 7.8 points lower than the level of this indicator in December;
- Index of Expectations of the Country’s Economic Development Over the Next Year (x3) decreased by 5.8 points and equals 49.2;
- Index of Expectations of the Country’s Economic Development over the Next 5 Years (x4) decreased by 5.7 points compared to last month and equals 70.8.

In January, the indicator of *Index of Expectations of Changes in Unemployment* slightly increased to the level of 147.2. *Index of Inflationary Expectations* increased by 3.2 points and reached the level 189.9. Expectations of Ukrainians regarding the hryvna’s exchange rate in the coming three months remain stable: *Index of Devaluation Expectations* equals 148.7.

‘The consumer confidence index in January 2021 reached its lowest level since April 2019. Thus, the index returned to the level as in early 2019, before it began to grow due to the presidential elections. The largest decline (7.8 points) in the CCI structure in January had the Index of Expected Changes in Personal Financial Standing and it returned to the level of early 2019. Lower expectations concerning personal income are associated with worse expectations of economic development in general.’ – as Info Sapiens analysts comment.

Dynamics of the Consumer Confidence Index in Ukraine (16+ target group)						
Month, year	Consumer Confidence Index (CCI)	Index of the Current Situation (ICS)	Index of Economic Expectations (IEE)	Index of Expectations of Changes in Unemployment (IECU)	Index of Inflationary Expectations (IIE)	Index of Devaluation Expectations (IDE)
01'21	60,7	57,4	62,9	147,2	189,9	148,7
12'20	65,9	60,8	69,3	144,6	186,7	147,8
01'20	89,0	79,0	95,7	118,8	180,9	131,7

How the indices are calculated

The survey «Consumer confidence in Ukraine» was conducted by GfK Ukraine since June 2000. From 2019 this project is provided by Info Sapiens. From January 2009 consumer confidence survey is conducted on a monthly basis.

In Ukraine, the Consumer Confidence Index is determined through a random survey of domestic households. The poll involves 1.000 individuals aged 16+. (Up to April 2014 the poll involved 1.000 respondents aged 15-59). A representative sample is selected by gender and age, also by type and size of settlement. In April 2014 Autonomous Republic of Crimea was excluded from the sample of consumer confidence research in Ukraine. The margin of error is 3.2%. In April and May 2020, the survey was conducted via CATI method with calls on mobile phones. Dates of the survey: January 15 – February 1.

To define the CCI, respondents are asked these questions:

1. How has the financial standing of your family changed over the last six months?
2. How do you think your family's financial standing will change in the next six months?
3. Looking at economic conditions in the country as a whole, do you think the next 12 months will be good or bad?
4. Looking at the next five years, will they be good ones or bad ones for the country's economy?

Dragon Capital

5. In terms of large purchases for your home. do you think now is generally a good time or a bad time to make such purchases?

Each of these questions is related to a corresponding index:

- Index of Current Personal Financial Standing (x1);
- Index of Expected Changes in Personal Financial Standing (x2);
- Index of Expected Economic Conditions in the Country Over the Next Year (x3);
- Index of Expected Economic Conditions in the Country Over the Next 5 Years (x4);
- Index of Propensity to Consume (x5).

Indices are constructed thus: the share of negative answers is deducted from the share of positive answers. and 100 is added to this difference in order to eliminate negative values. On the basis of these five indices. three aggregate indices are calculated:

- Consumer Confidence Index (CCI) as the arithmetic average of indices x1–x5;
- Index of the Current Situation (ICS) as the arithmetic average of indices x1 and x5;
- Index of Economic Expectations (IEE) as the arithmetic average of indices x2. x3. and x4.

Index values range from 0 to 200. The index equals 200 when all respondents positively assess the economic situation. It totals 100 when the shares of positive and negative assessments are equal. Indices of less than 100 indicate the prevalence of negative assessments.

To determine the Index of Expected Changes in Unemployment (IECU). the Index of Inflationary Expectations (IIE) and the Index of Devaluation Expectations (IDE). the respondents are asked these three questions:

1. Do you think that within next 12 months the number of unemployed (people who do not have job and are looking for work) will increase. will remain roughly the same. or will decrease?
2. How do you think that prices for major consumer goods and services will change in the next 1–2 months?
3. How do you think the USD value will change towards the UAH value during the next 3 months?

The IECU. the IIE and the IDE are calculated thus: the share of answers that indicate a decrease of unemployment/inflation/devaluation is subtracted from the share of answers that indicate the growth of unemployment/inflation/devaluation. and 100 is added to the difference to eliminate negative values. The values of indices can vary from 0 to 200. The index totals 200 when all residents expect an increase in unemployment/inflation/devaluation.

About Info Sapiens

Research agency Info Sapiens specializes in public opinion polls. behavioral studies and secondary data analysis. Our team complies with the ICC/ESOMAR International Code of Marketing and Social Research Practice and is a member of Ukrainian Marketing Association.

Info Sapiens provides fieldwork for GfK Ukraine projects and also independently conducts research projects. namely social and political surveys including «Consumer confidence in Ukraine». More information about the company and its services is available on the [website](#) or [facebook page](#).
