Information on the research

The research sample includes 1024 respondents. The survey was conducted with a CATI method (computer-assisted telephone interviews) based on a random sample of mobile phone numbers. The sample is representative for the adult population (18+ years) of Ukraine by gender, age, settlement size and residence region. The Autonomous Republic of Crimea and the city of Sevastopol were excluded from the study. In addition, in the Donetsk and Luhansk oblasts the survey was conducted only in the territories controlled by Ukraine. Also, the survey does not cover Ukrainians who went abroad.

The maximum theoretical error does not exceed 3.1%. The survey was conducted on March 3-4, 2022.
